

ESC's approach to Chemical Feeding using a Venturi.

In the past several years, ESC has re-introduced an old technology to address a common problem associated with CIP. That being the constant maintenance associated with chemical feed pumps.

ESC Venturi Chemical Feeders

- Safe
- Reliable
- Small
- Lightweight

The advantages of a Venturi feeder are:

- No moving parts
- Repeatable and reliable performance
- Concentrated chemicals are never under pressure
- Small space requirement

The Venturi occupies a fraction of the space required for chemical pumps and is also very lightweight, making it an ideal application for portable CIP equipment.
